RECAP

Key points to remember

- AI offers many opportunities in modern technology and in a fast-growing job market!

- AI professionals are needed across industries, like financial services, weather prediction, healthcare, and advanced robotics.

- Consider exploring job roles that use AI skills, such as:

  - Machine learning engineer

  - Machine learning scientist

  - Software engineer

  - Research engineer

  - Robotic scientist

  - Data scientist

  - Business intelligence developer

  - Algorithm specialist

  - Natural language processing (NLP) engineer

- The core skills you should have include a knowledge of data science and the ability to code in several programming languages.

- Different job roles within the AI field have different requirements and can provide rewarding work on different aspects of artificial intelligence
